

ND-LEEF'S NEW EAGLE CAM

The Environmental Change Initiative is excited to announce the return of a pair of bald eagles at our research facility at St. Patrick's County Park.

In the spring of 2015, two bald eagles took over an existing red-tailed hawk nest at the Notre Dame Linked Experimental Ecosystem Facility (ND-LEEF) and fledged one eaglet.

"We are just thrilled that the eagles have returned this year to their home at ND-LEEF," said Jennifer Tank, ECI director. "It is great to know that during the off-season, when the science and outreach activity has slowed, that the eagles are thriving alongside the unique beauty of the facility and the surrounding St. Patrick's County Park."

Given the overwhelming interest sparked by the eagles' historic arrival, a camera was installed at ND-LEEF this winter. Now bird enthusiasts can enjoy the live view of the nest 24/7!

For more information on ND-LEEF and to view the eagle cam live stream: Visit <http://environmentalchange.nd.edu/programs/nd-leef/eagles>
